DETAILED ACTION

1. This office action is in response to amendment filed July 25, 2005.

EXAMINER'S AMENDMENT

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Robert C.Colwell (Reg. No. 27,431) on September 1, 2005.

The application has been amended as follows:

In the Claims:

Claim 21 (currently amended): A method comprising:

Providing a logical disk configured as a plurality of logical entities, each of the logical entities being configured as a plurality of physical disks;

Copying at least some portion of data on a first logical entity to at least one physical disk not included in the plurality of logical entities[.];

Determining a relatively highly accessed one of the plurality of logical entities;

and

Selecting that relatively highly accessed one of the plurality of logical entities for the step of copying.

Claim 22 (canceled).

Claim 28 (canceled).

Claim 30 (currently amended): A storage system comprising:

A plurality of physical disks; and

A controller coupled to the physical disks, the controller configured to:

Providing a logical disk configured as a plurality of logical entities, each of the logical entities being implemented with a subset of the plurality of physical disks;

Copy at least some portion of data on one of the logical entities to at least one physical disk not included in the subset of the plurality of physical disks[.];

Determine a relatively highly accessed one of the plurality of logical entities; and

Select that relatively highly accessed one of the plurality of logical entities for the step of copying.

Claim 32 (new): A method comprising:

Providing a logical disk configured as a plurality of logical entities, each of the logical entities being configured as a plurality of physical disks;

Copying at least some portion of data on a first logical entity to at least one physical disk not included in the plurality of logical entities; and wherein

The plurality of logical entities include a parity group which is partitioned into two parity groups, each of the logical entities being configured as a plurality of physical disks, the at least one physical disk not included in the plurality of logical entities includes a set of physical disks, and one of the two parity groups is copied to the set of physical disks.

Art Unit: 2189

Claim 33 (new): The method of claim 32 further comprising before the step of copying, steps of:

Determine a relatively highly accessed one of the plurality of logical entities; and

Select that relatively highly accessed one of the plurality of logical entities for the step of copying.

Claim 34 (new): The method of claim 32 wherein the plurality of physical disks is the same as the number of the at least one physical disk not included in the plurality of logical entities.

Claim 35 (new): The method as in claim 33 wherein the logical entities comprise parity groups.

Claim 36 (new): A storage system comprising:

A plurality of physical disks; and

A controller to the physical disks, the controller configured to:

Provide a logical disk configured as a plurality of logical entities, each of the logical entities being implemented with a subset of the plurality of physical disks;

Copy at least some portion of data on one of the logical entities to at least one physical disk not included in the subset of the plurality of physical disks;

Art Unit: 2189

Determine a relatively highly accessed one of the plurality of logical entities;

Select that relatively highly accessed one of the plurality of logical entities for the step of copying;

Wherein the plurality of logical entities include a parity group which is partitioned into two parity groups, each of the logical entities being configured as a plurality of physical disks, the at least one physical disk not included in the plurality of logical entities includes a set of physical disks, and one of the two parity groups is copied to set of physical disks.

Claim 37 (new): The storage system as in claim 39 wherein the controller is further configured to divide at least one of the plurality of logical entities into at least two logical entities, each one of the at least two logical entities being implemented by a different subset of the plurality of physical disks.
